

# How to fix a common fault on a Humax DTR-1010 PVR

How to stop PVR from hanging at the "Please Wait" point on the display after switch on and not proceeding to normal TV reception

Written By: Bill Craven

## INTRODUCTION

This is software related and you do not need tools. Method.

Connect the unit up to the TV including the RJ45 internet input. Switch off the unit via the rear switch. Switch it on again and press the 'on' switch to the left of the front panel. When the centre ring lights up quickly press the most left dot on the centre ring (9 o'clock position ), A message "Enter Maintenance Mode" should appear on the TV display (the TV display message disappears ). Wait a short time, around 3 - 5 minutes, and then the Maintenance Mode choices are displayed. The top one is the least invasive, the bottom choice is the most invasive but they all are safe to use. Using the remote control, the 'P' rocker switch controls which of the choices to use by scrolling up and down the choices. Confirm your choice by using the Volume rocker switch (Vol -ive). and proceed pressing the Vol -ive switch. The unit will then update software and or repair software and usually fixes the common 'Please Wait' fault but, of course, no guarantees. I've put this 'fix' up because Humax doesn't seem to publish the way to access the Maintenance mode.

To reassemble your device, follow these instructions in reverse order.
